SchoolPilot

FEATURE GUIDE FOR SCHOOLS

Everything a school runs on, in one login.

A cloud-based school management platform for private K-12 schools in Nigeria, day and boarding: student records, results, fees, computer-based testing, boarding and AI-assisted teaching, built to run on the phones, laptops and lab computers your school already owns.

DOCUMENT	UPDATED	BUILT FOR	HARDWARE REQUIRED
Feature Guide v2	October 2026	Private K-12, Nigeria	None

01 The platform at a glance

What it is, and how it thinks

SchoolPilot runs teaching, learning, administration, boarding, communication and examinations for private K-12 schools of 50 to 3,000 students, schools currently running on paper, Excel or another portal. It is software-only: no biometric readers, no RFID, no scanners, no sensors. Attendance uses the phone camera already in a teacher's pocket, staff check in with their own phone's GPS, and the bus is tracked from the driver's phone.

5
School roles out of the box (admin, bursar, teacher, student, parent) plus custom roles

1
App to install, whichever role you are, not separate downloads

3
AI providers to choose from: Claude, ChatGPT or Gemini

0
Devices to purchase, install, wire in or maintain

WHO USES IT

School admin
Users and accounts, students from admission to graduation, staff, timetables, results release, module and AI settings: the whole office in one place.

Bursar
Fee structures, term invoices, collecting payments with receipts, scholarships, hostel charges and the school's accounts.

Teacher
Attendance, scores, homework, CBT question banks, lesson plans, AI Studio drafts, leave requests and the staff inbox.

Student
A printable timetable, homework, CBT, released results, progress by topic, the AI tutor, fees and hostel, and their own profile.

Parent
Each child's attendance, homework, results, fees, hostel and ID card, with consent choices and who may collect them from school.

SchoolPilot
Onboarding, billing, AI provider and spend, result PINs, compliance and audit, from a separate operator console.

SIX COMMITMENTS BEHIND EVERY FEATURE

1 · Software-only, always
If it can't run on a phone camera, phone GPS or a browser, it doesn't ship. Hardware is a permanent boundary, not a later phase.

2 · Nigerian K-12, not translated
Sessions, terms, classes and arms from nursery to SS3. CA schemes, broadsheets, WAEC. No faculties, no semesters, no GPA.

3 · Works when the network doesn't
Registers and scores queue on the phone with no signal and sync safely; CBT runs in the lab with no internet.

4 · AI drafts, teachers decide
Every AI-drafted remark waits for a teacher to approve or edit it. A report card cannot carry an unapproved comment.

5 · NDPA-first, because the records are children's
Data minimisation by default: a child's name is never sent to an AI provider, and medical fields are encrypted.

6 · Your records stay yours
Free migration in, a full export out, whenever you ask. Nothing about leaving is designed to be difficult.

02 Running the school

Records, structure & the daily loop

FOUNDATION

Your own school portal — LIVE

Every school gets its own web address, its own branded sign-in page and fully isolated data: no other school can see a record of yours. We migrate your existing records in, free, within 24 hours.

Users, roles & permissions — LIVE

Create accounts, reset passwords and lock accounts from one screen. Custom roles for schools that split responsibilities differently: a bursar who sees finance but not medical notes.

Student records & lifecycle — LIVE

The Nigerian registration form, digitised, with several guardians per child for split families. Promotion, repeat, withdrawal, graduation and transfer are kept as records, never overwritten, and duplicate applicants are flagged.

Admissions — LIVE

Parents apply online with documents; review, entrance assessment, offer and enrolment create the student record with no retyping.

Academic history & transfers — LIVE

Each term is closed into a permanent record. Transcripts and transfer certificates carry a QR code to verify them; records received from another school keep their original names beside yours. Families can report a mistake for the school to correct.

Staff, HR & payroll — LIVE

Staff records, contracts, class and subject assignment, leave requests, loans and monthly payroll with payslips, approved before it is paid.

THE DAILY LOOP

Attendance — LIVE

By QR scan through the app's own camera or by register, with corrections approved and an alert to parents of absent children. Staff clock in with their own phone's GPS, checked against the school's gate.

Timetable — LIVE

A conflict-free master timetable generated around teacher availability, saved as versions. Students see theirs as a calendar they can print.

Cover & leave — LIVE

Teacher leave requests, approval, and cover for the lessons they miss, so a class is never left without a teacher.

What replaces the hardware

Every capability a competitor solves with a purchased device, SchoolPilot solves in software on equipment your school already owns.

ASSUMED TO NEED HARDWARE	WHAT SCHOOLPILOT USES INSTEAD	STATUS
Attendance tracking	**QR code** scanned by the app's own camera, or a teacher's register	LIVE
Staff clock-in	The staff member's own **phone GPS**, checked against your gate	LIVE
Offline exam days	The **lab client** on one school laptop serves the paper to existing lab PCs	PILOT
Bus tracking	The **driver's phone**, sharing location only while a route is active	LIVE
Library check-in / out	**Phone camera** scanning a printed barcode, or manual entry	LIVE
ID cards	A generated, **printable PDF** with a QR code, from your own card design	LIVE
"Smart" classrooms	**Virtual classes** on your Zoom or Google Meet, attendance read from the meeting	LIVE

03 Assessment, results & CBT

The module a school feels first

Result processing is where the manual alternative hurts most. Days of a form teacher's time become a background job, and the report card that comes out can be verified as genuine by anyone holding it.

RESULTS

CA schemes per section — LIVE

Number of CAs, their weights and grade boundaries are set per section: nursery, primary, JSS and SS can each grade differently. Homework and coursework can fill a CA, adjusted by the teacher.

Broadsheets & positions — LIVE

Totals, averages, class and subject positions computed as scores arrive; termly and annual broadsheets; changes after submission go through approval with the history kept.

Your report card design — LIVE

Choose a template carrying your crest and sections. Nursery classes can use developmental ratings instead of scores.

QR authenticity — LIVE

Every report card carries a QR code. A parent, a receiving school or an employer can scan it and confirm it is genuine and unaltered.

Result PINs — LIVE

Issue result-checker PINs in batches and track their use: the scratch-card model parents already know, issued digitally.

You decide when results go out — LIVE

Results reach families only when the school releases them for a term, so a half-entered broadsheet never leaks out as a result.

COMPUTER-BASED TESTING

CBT engine — LIVE

WAEC, NECO and BECE-style papers: question and option shuffling per candidate, timed sittings with autosave, automatic objective marking, pass marks.

- Comprehension passages with several questions
- Maths rendered without internet
- Theory answers marked by the teacher

Question bank — LIVE

Tagged by subject, topic and difficulty, with bulk import and versions kept when a question is edited, reusable across exams and terms.

- Images in questions and options
- Per-topic score breakdown

Lab client, no internet — PILOT

One school laptop downloads the sealed paper the day before and serves it to the lab PCs over the lab's own network, wired, Wi-Fi or its own hotspot. Answers upload afterwards; a PC that dies resumes where it stopped. In pilot with schools now.

An AI comment never reaches a report card unreviewed

SchoolPilot can draft a remark from a student's subject and score, but every draft lands in **pending approval** and stays there until a teacher approves or edits it. The report card generator refuses to print an unapproved comment. The child's name is added on our side; it is **never sent to the AI provider**.

04 Teaching, AI & money

The classroom and the bursary

LEARNING

Materials & homework — LIVE

Notes, slides and worksheets per subject, reviewed before students see them. Homework submitted online, marked with feedback, and counted towards CA.

Virtual classes — LIVE

Lessons scheduled on the school's Zoom or Google Meet, with attendance read from the meeting report.

Progress & points — LIVE

Per-topic mastery from tests and tutor sessions, points and badges, and a progress view for each student and their parents.

AI, WHERE IT EARNS ITS KEEP

AI Studio for teachers — LIVE

Lesson plans with objectives, activities and assessment; exam questions and homework ideas; translation; and performance summaries drafted from a student's released results. Every draft is for the teacher to edit, on the Nigerian curriculum.

AI tutor for students — LIVE

A study tutor that guides rather than hands over answers. The school sets which sections and subjects may use it, a daily message limit, and a lock during CBT exams. Conversations are kept so a student picks up where they left off.

Your choice of AI — NEW

Claude, ChatGPT or Gemini: the school chooses the provider and a quality level (fast, balanced or best), and can switch at any time from its AI settings.

Every AI feature has an off switch — LIVE

Report comments, lesson plans, exam questions, homework ideas, translation, summaries and the tutor are each their own switch. A daily spending limit applies to every school.

FEES, FINANCE & ACCOUNTING

Fee structures & invoicing — LIVE

Fees per class and term drive the term's invoices automatically, with instalments that must add up to the balance, scholarships and discounts, and a list of who owes.

Collecting payments — LIVE

Paystack and Flutterwave for online payment, configured per school; cash and transfers recorded at the bursary on the same ledger, each with a printable receipt.

School accounting — LIVE

Expenses, vendors, petty cash, budgets and payroll, so the bursary runs in the same system as the classroom instead of beside it in Excel.

Fee reminders that don't harass — LIVE

Reminders to parents with a balance, deliberately throttled. Push is free and SMS is billed, so the channel is always the bursar's choice.

05 Boarding, campus & families

Hostel, transport, library, health & parents

BOARDING

Hostel management — LIVE

Houses, rooms and beds; boarding applications and allocation for full, weekly and flexible boarders; hostel assets and maintenance requests.

Exeats, roll calls & movements — LIVE

Leave requests approved with the parent's consent, roll calls, sign-out and return logged with late returns flagged, and incident reports.

Hostel fees on the invoice — LIVE

Boarding fee rules per category, billed onto each boarder's term invoice, so they are paid through the same ledger as school fees.

Sick bay — LIVE

A clinic log of visits and treatment, with medical fields encrypted and visible only to the roles that need them.

AROUND THE CAMPUS

Transport — LIVE

Buses and routes, with the bus's position shared from the driver's phone while a route runs.

Library — LIVE

Catalogue, borrowing and returns by phone-camera barcode, and each student's books on loan.

ID cards — LIVE

Card designs per school, print-ready PDFs with a QR code, reissue and revocation of lost cards.

FAMILIES & COMMUNICATION

Parent portal & app — LIVE

Each child's attendance, homework, results, fees, hostel and ID card. In split families each guardian gets their own access to the same child.

Safe pickup & consent — LIVE

Parents name who may collect their child and can withdraw it at any time. Consent, including for AI features that use a provider outside Nigeria, is the parent's choice, never assumed.

Messaging & notifications — LIVE

A staff inbox, announcements, push notifications to the app, and SMS and WhatsApp for messages that must reach a feature phone.

Behaviour & portfolio — LIVE

Behaviour notes that reach the real guardians, and a portfolio of work and achievements beside the marks.

No biometrics is a compliance decision, not only a cost one

Biometric data is a stricter category of sensitive data under the NDPA. By never collecting it, your school avoids a whole tier of consent and security obligations, on top of the hardware saving.

06 Trust, insight & pricing

Security, analytics and what it costs

Security — LIVE

Encryption in transit and at rest, field-level encryption of medical details, two-factor sign-in for administrators, audit logs, login history and rate limiting.

NDPA compliance — LIVE

Consent recorded with time and source and withdrawable; data minimisation, including to AI providers; a full export of your school's data on demand.

Dashboards & alerts — LIVE

Principal, teacher, student and parent dashboards: attendance, fees collected, results waiting for approval, and students whose scores are slipping.

Web portal — LIVE

For the staff-heavy work: bulk score entry, finance, CBT authoring, setup and reports.

One mobile app — LIVE

A single app with role-based navigation for every role, not separate apps to install and explain.

Works without signal — LIVE

Registers and scores queue on the phone and sync when signal returns, without double-posting.

PLANS & PRICING

Per active student, per term, in Naira. A student counts if they were enrolled in a class at any point in the term. No per-exam, per-teacher or per-parent fees; CBT, the LMS, AI and the apps are included in every plan.

FULL SERVICE

School Management with Result Management

₦500

per active student, per term

- Everything in the platform
- Result computation, broadsheets and positions
- Report cards, printing and result PINs

30-DAY FREE TRIAL

School Management Subscription

₦300

per active student, per term

- Everything in the platform
- For schools with their own result process
- No result computation or printing

ON EITHER PLAN

School Management with Boarding School Management

₦1,000

per boarding student, per term

- Charged for boarders in place of the plan rate
- Hostel, exeats, roll calls, hostel fees
- Day students stay at their plan rate

ACTIVE STUDENTS	WITH RESULT MANAGEMENT	SUBSCRIPTION
300	₦150,000 per term	₦90,000 per term
500	₦250,000 per term	₦150,000 per term
1,000	₦500,000 per term	₦300,000 per term
500, of whom 100 board	400 × ₦500 + 100 × ₦1,000 = ₦300,000	400 × ₦300 + 100 × ₦1,000 = ₦220,000

07 What's live, and what's next

Stated plainly, so nothing is oversold

The first column is working software today; every card in this guide carries the same badge. The second is in pilot or next on the roadmap. The third is planned and not started, marked that way so you never have to guess.

AVAILABLE NOW

Working today

- Your own portal, branded sign-in, free migration
- Users, roles, student lifecycle, admissions
- Academic history, transcripts, transfers
- Staff, HR, leave, cover and payroll
- QR and register attendance, GPS clock-in
- Timetables, printable student calendar
- CA schemes, broadsheets, positions
- QR-verified report cards, result PINs
- Online CBT, question bank, theory marking
- Materials, homework, virtual classes
- AI Studio and tutor: Claude, ChatGPT or Gemini
- Fees, Paystack and Flutterwave, accounting
- Hostel, exeats, roll calls, sick bay
- Transport, library, ID cards
- Parent app, pickup and consent, messaging
- Dashboards, 2FA, audit logs, data export

PILOT & ROADMAP

In pilot, or next

- CBT lab client with no internet: in pilot with schools
- Rubric-based marking
- Peer review on assignments
- More CBT question types: drag-and-drop, diagram labelling
- NABTEB, Cambridge and Montessori tagging
- The tutor in Yoruba, Hausa, Igbo and French
- Class discussion forums
- Staff appraisals and certificate tracking

PLANNED

Not built yet

- Full international-curriculum support for dual-curriculum schools
- Vaccination tracking in the sick bay
- Hostel visitor logs

Permanently out of scope. Facial recognition. Fingerprint and biometric scanners. RFID readers and RFID cards. Barcode-scanner guns. Dedicated vehicle GPS units. IoT classroom sensors, smart boards, digital bells, smart lockers. VR and AR headsets. These are not deferred; they are excluded. Each would turn going live this week into a multi-week hardware rollout, in a market whose schools run on fee income and inconsistent power.

Everything your front office, classroom, bursary and boarding house need, in one login.

Running on the phones, laptops and lab computers you already own.
